

Pterocarpus indicus	G
Pterocarpus soyauxii	F
Pterygota bequaertii	A
Quercus cerris	E
Quercus delegatensis	C
Quercus gigantean	C
Quercus robur	A
Quercus spp	A
Ricinodendron heudelottii	F
Sarcocephalus diderrichii	H
Scottellia coriacea	E
Sequoia sempervirens	B
Shorea smithiana	C
Shorea spp	B
Sterculia rhinopetala	A
Swietenia candollei	A
Swietenia mahogani	B
Syncarpia glomulifera	C
Syncarpia laurifolia	C
Tarrietia utilis	C
Taxus baccata	C
Tectona grandis	F
Terminalia superba	A
Thuja plicata	C
Thujopsis dolabrat	J
Tieghamella heckelii	B
Tilia americana	G
Tilia vulgaris	E
Triploehiton scleroxylon	G
Tsuga heterophyllia	C
Ulmus americana	E
Ulmus procera	E
Ulmus thomasii	E
Xylia dolabriformis	E
Zelkova serrata	B

NOTES

- Protimeter Mini, Surveymaster and MMS instruments display Standard Scale A. Protimeter Timbermaster displays all scales.
- The calibration data in this table are based on standard tests by oven-drying of commercial samples of the various wood species, between 7% and fibre saturation. Above fibre saturation point (25-30%) readings are approximate only and generally apply to wood that has dried and been re-wetted.
- The instrument is calibrated for wood at 20°C (68°F). If the temperature of the wood varies by more than 5°C, the meter reading can be corrected approximately by adding 1/2% for every 5°C below 20°C or subtracting 1/2% for every 5°C above 20°C.
- Readings higher by 1-2% may be obtained where wood has been impregnated with a water-borne preservative.
- High readings obtained with some ply-woods of peculiar composition must be treated with caution.

Std Scale A	Species Group							Chip- board
	B	C	E	F	G	H	J
