

MTL 9108-22

Redundant FISCO power for Yokogawa CENTUM SC3000 - IIB Gas Groups

- **Redundant power supply configuration for high system availability**
- **4 segments**
- **Integrated connections to redundant ALF111 Foundation fieldbus™ communication modules**
- **245mA output per segment for IIB Gas Groups**
- **Enhancement of field-proven 912x-IS FISCO power supply**
- **Rugged construction for easy cabinet mounting and resistance to shock and vibration**

System Overview

The 9108 power supply system provides an intrinsically safe field network for FOUNDATION™ fieldbus systems in hazardous areas. The output of the power supply modules complies with the Fieldbus Intrinsically Safe Concept (FISCO) model, in accordance with IEC standard 60079-27. The key advantages of FISCO over earlier 'Entity' model installations to FF-816 are higher available field current and reduced safety documentation, while retaining the ability to conduct maintenance while energised and without 'gas clearance'.

The 9108 system builds on MTL 912x-IS range of power supplies, which have become established as the industry standard solution for FISCO networks. The 9108 system now achieves higher levels of overall system availability by providing redundancy of the power modules.

When used with intrinsically safe versions of MTL Megablock field wiring hubs, the power supply system allows complete FISCO networks to be assembled for even the most demanding process applications.

Architecture

Each fieldbus segment is powered by a redundant pair of pluggable FISCO power supply modules. The modules operate in active/hot standby mode, ensuring that the fieldbus segments are continually powered. In the event of a failure of an active power supply module, the field circuit is automatically transferred to the standby module. The change-over is managed by Supply Arbitration Modules (SAMs), which monitor the health of the FISCO power supplies while maintaining intrinsic safety requirements during the transition to the standby module. The SAMs are also duplicated and replaceable, meaning that there are no non-redundant system components.

Switch-over is achieved rapidly and in accordance with FOUNDATION™ fieldbus specifications, and without risk of losing fieldbus devices from the bus. A combinationagnostics and alarm signalling provides failure notification of FISCO power supplies and SAMs, allowing failed hardware to be identified and full redundancy to be restored by module replacement.

Carrier

The module carrier provides fieldbus power for four fieldbus segments. It supports pluggable power supply and arbitration modules for each segment and all connection facilities. Each carrier has connections for redundant 24V input power, ALF111 fieldbus communication modules via AKB336 cables and intrinsically safe field trunks. A volt-free failure alarm is also provided for connection to a digital input module. There are no active electronic circuits on the carrier, resulting in long calculated Mean Time to Failure (MTTF) and overall high system availability.

The carrier dimensions are designed to provide high packing density in typical 800mm wide equipment cabinets. Survival in high-vibration marine environments is achieved by secure panel-mount fixings.

The FISCO power supply modules are pluggable versions of MTL 912x-IS range, and support the same level of features. LED indicators provide information on system health and assist with fault diagnosis.

REDUNDANCY BLOCK DIAGRAM
(one segment shown)

DIMENSIONS (mm)

SPECIFICATION**OUTPUTS****Number of segments**

Four

Voltage

12.9V (min.) at 25°C (see Note)

Design current

0 to 245mA

Current limit

>270mA

Output ripple

Complies with clause 12.7.3 of EN61158-02:2004

Minimum load

No load

Isolation

Host fieldbus to intrinsically safe fieldbus: 250V ac rms
 Host/intrinsically safe fieldbus to power supply: 250V ac rms
 $U_m = 253V$ rms

Note: Temperature coefficient 12mV/°C maximum. If the power supply and fieldbus cable are operated at low temperatures, the reduced resistance of the cable more than compensates for the reduction in output voltage.

INPUTS**Input voltage**

19.2 - 30V dc

Current consumption per segment (full load):

570 mA (typical) 625 mA (max.) at 24V

Power dissipation per segment (200mA load):

9.7W (typical) 10.2W (max.)

Power dissipation per segment (full load):

10.3W (typical) 11.5W (max.)

SAFETY**Location of fieldbus power supply carrier**

Safe area or Zone 2 IIB T4 hazardous area

Location of field wiring

Zone 1, IIB hazardous area

Field wiring protection

Intrinsically safe

Safety description, each segment

14.8V, 359mA, 5.31W, 0.50μF*, 550μH*

* When used in accordance with IEC60079-27, there is no need to take into consideration Co and Lo.

Certification codes

ATEX: E II (2) GD [Ex ib] IIB [Ex ibD]

IECEx: [Ex ib] IIB [Ex ibD]

Certificate numbers

ATEX: Baseefa09ATEX0127, MTL09ATEX9108X

IECEx: IECEx BAS 09.0055

Certification compatible with:

- Fieldbus Foundation FF816-FISCO
- IEC 60079-27 FISCO Standard
- EC Directive 94/9/EC

FIELDBUS TERMINATION

2 x fixed terminator per host segment on module carrier

Fixed terminator per field segment inside each 9122-IS module

CONNECTIONS**Host fieldbus**

Redundant shrouded multipin connectors to Yokogawa ALF111
 host cards via AKB336 cables

Hazardous Area fieldbus

3-way pluggable rising cage-clamp screw terminal or spring
 clamp terminal per segment
 Conductor size: 0.14 to 2.5 mm²

24V power

2-way pluggable rising cage-clamp screw terminal each for
 Power A and Power B
 Conductor size: 0.14 to 2.5 mm²

Alarm

2-way pluggable rising cage-clamp screw terminal
 Conductor size: 0.14 to 2.5 mm²

ALARMS**Alarm contact rating**

Max. 250V, 100mA (solid state)

Alarm contact status

Normally closed, open on failure of any FISCO power supply
 module or Supply Arbitration Module

MECHANICAL**Mounting**

Surface mounting

Weight

5.5kg

Dimensions (refer also to diagram)

255(w) x 320(h) x 154(d) mm

ENVIRONMENTAL**Ambient temperature**

-20°C to +60°C (operating)

-40°C to +85°C (storage)

Ingress protection

IP20 to BS EN 60529 (Additional protection by means of
 enclosure)

Marine approvals

Pending

LED INDICATORS

Carrier Power Inputs

	OFF	ON
Power (green)	Power fail	Power OK

FISCO Power Supply - 9122-IS-CM

	OFF	ON
Power (green)	Power fail or internal fault	Power OK
Fault (red)	Normal	Fault
Host Comm (yellow)	Comms failure	Comms OK
IS Comm (yellow)	Comms failure	Comms OK

Supply Arbitration Module (SAM) - 9129-IS

Active Mode	Active LED - ON	Standby LED - OFF
Standby Mode	Active LED - OFF	Standby LED - ON
Fault/Alarm Mode	Active LED or Standby LED - OFF or FLASHING*	

* Note: During startup, either of the LEDs may flash for up to 10
 seconds - this is normal operation.

MTL 9108-22

February 2017

ORDERING INFORMATION

Description	Part Number
Redundant FISCO power supply system, (4 segment, pluggable screw terminals, IIB Gas Groups, for Yokogawa control systems) Comprises: 8x 9122-IS-CM, 8 x 9129-IS, 1 x 9108-CA-PS	9108-22-PS
Redundant FISCO power supply system (4 segment, pluggable spring clamp terminals, IIB Gas Groups, for Yokogawa control systems) Comprises: 8x 9122-IS-CM, 8 x 9129-IS, 1 x 9108-CA-PC	9108-22-PC
FISCO power supply, (IIB Gas Group, pluggable carrier mount)	9122-IS-CM
Supply arbitration module	9129-IS
Alarm blanking module (To defeat carrier alarm if power supplies and supply arbitration modules are not fitted. Two required per segment)	9127-BLK
Module carrier, (4 segment, pluggable screw terminals)	9108-CA-PS
Module carrier, (4 segment, pluggable spring clamp terminals)	9108-CA-PC
