

Rosemount™ 1208C Level and Flow Transmitter

Non-Contacting Radar with HART® Protocol

- Cost-effective FMCW radar with 80 GHz technology
- Compact and robust housing that withstands outdoor conditions, is submersible, and is suitable for hazardous locations
- Ideal for level measurement in small tanks and open air applications
- Volume flow measurement in open channels
- Maintenance free solution unaffected by process conditions such as density, viscosity, temperature, and pressure
- 4-20 mA HART® Revision 7 and models with Bluetooth® connectivity deliver ease of integration to existing and new systems

Introduction

Good fit for open air applications

Rosemount 1208C delivers reliable level measurements regardless of challenging weather conditions such as condensation, wind, sunlight, and changing temperature. The transmitter can also be used in open channel applications to determine the volume flow.

Figure 1: Bracket Mounting

- A. M12 connector for simple commissioning
- B. PVDF housing
- C. Standard bracket
- D. Extendable bracket

Installation flexibility on tanks

The compact design of the transmitter allows it to be installed in tight spaces and small vessels, either by using a threaded flange or a threaded fitting.

Easy integration into control systems

Connect the Rosemount 1208C to your host system or visualize and control your process data by pairing with the Rosemount 3490 Controller. The controller provides comprehensive control functionality for any of your 4–20 mA or HART compatible devices.

Non-contacting radar technology

Non-contacting radar technology is ideal for a wide range of applications as it is maintenance-free, has a top-down installation that reduces the risk of leakages, and is unaffected by process conditions such as density, viscosity, temperature, pressure, and pH.

The device uses Frequency Modulated Continuous Wave (FMCW) technology and smart algorithms, such as Smart Echo Supervision™ technology, to maximize measurement accuracy and reliability. This ensures optimal performance, even in small tanks and challenging fast-filling vessels.

Application examples

Level and pump control

Pump stations need accurate measurement and control to ensure an optimal water flow to the next stage of the potabilization process, while also avoiding overflows and pumps from dry-running. Level measurement is essential to ensure a sustainable extraction of water and a sufficient supply of water to the next phases of the potabilization process.

Open channel flow

Open-air channels transport water from a water source to a water plant where it will be processed. Flow monitoring in open channels is important to know the amount of water that is flowing to comply with regulations and avoid flooding.

Differential level

In the screening process level measurement is necessary to monitor the level of water in the different parts of the screen, which will determine when to start the cleaning of the sieve.

Tank volume

Storage tanks are used in water processes to store chemical substances, which are needed to treat the water. Level measurement is necessary to monitor, optimize chemical dosing, and avoid overfilling.

Access information when you need it with asset tags

Newly shipped devices include a unique QR code asset tag that enables you to access serialized information directly from the device. With this capability, you can:

- Access device drawings, diagrams, technical documentation, and troubleshooting information in your MyEmerson account.
- Improve mean time to repair and maintain efficiency.
- Ensure confidence that you have located the correct device.
- Eliminate the time-consuming process of locating and transcribing nameplates to view asset information.

Ordering information

Online product configurator

Many products are configurable online using our product configurator. Select the **Configure** button or visit [Emerson.com/global](https://emerson.com/global) to start. With this tool's built-in logic and continuous validation, you can configure your products more quickly and accurately.

Specifications and options

Specification and selection of product materials, options, and/or components must be made by the purchaser of the equipment.

(3) A captive safety clip is shipped with each cable.

Performance specifications

General

Reference conditions

- Measurement target: Stationary metal plate, no disturbing objects
- Temperature: 59 to 77 °F (15 to 25 °C)
- Ambient pressure: 14 to 15 psi (960 to 1060 mbar)
- Relative humidity: 25-75%
- Damping: Default value, 2 s
- Frequency range: 77 to 81 GHz⁽¹⁾

Instrument accuracy (under reference conditions)

±0.08 in. (±2 mm)⁽²⁾

(1) Radar performance may be affected if it is configured for certain local radio spectrum regulations.

(2) Refers to inaccuracy according to IEC 60770-1 when excluding installation dependent offset. See the IEC 60770-1 standard for a definition of radar specific performance parameters and if applicable corresponding test procedures.

Repeatability

±0.04 in. (±1 mm)

Ambient temperature effect

±0.04 in. (±1 mm)/10 K

Sensor update rate

1 update per second

Maximum level rate

200 mm/s

Measuring range**Maximum measuring range**49 ft. (15 m)⁽³⁾**Accuracy over measuring range**

Figure 3 illustrates the accuracy over measuring range at reference conditions.

Figure 3: Accuracy Over Measuring Range

- A. Device Reference Point
- B. Accuracy in inches (millimeters)
- C. Distance in inches (millimeters)

(3) The measuring range is limited to 33 ft. (10 m) for oil-based media (dielectric constant < 10). Also note that a combination of adverse process conditions, such as heavy turbulence, foam, and condensation, together with products with poor reflection may affect the measuring range.

Environment

Vibration resistance

2 g at 10-1000 Hz according to IEC 61298-3, level “field with general application”

Electromagnetic compatibility (EMC)

- EMC Directive (2014/30/EU): EN 61326-1
- NAMUR recommendations NE21

Pressure Equipment Directive (PED)

Complies with 2014/68/EU article 4.3

Built-in lightning protection

EN 61326, IEC 61000-4-5, level 1kV

Radio approvals

- Radio Equipment Directive (2014/53/EU):
 - ETSI EN 302 372
 - ETSI EN 302 729
 - EN 62479
- Part 15 of the FCC Rules
- Industry Canada RSS 211
- Other country approvals

[Product certifications](#)

Functional specifications

General

Field of application

Continuous measurement of level and open channel flow.

Solids level measurement

The Rosemount 1208C is capable of measuring in many solids applications, including limestone and fly ash tanks.

Note

Sensitivity and performance in solids applications may vary on the reflectivity properties of the media. These properties include dielectric constant, consistency, humidity, grain size, and angle of repose.

Minimum dielectric constant

2

Measurement principle

Frequency Modulated Continuous Wave (FMCW)

Frequency range

77 to 81 GHz (76 to 77 GHz in applicable countries)

Note

Operating the device without selecting the relevant radio spectrum may constitute a violation of the regulations of the radio approvals of the respective country.

Maximum output power

3 dBm (2 mW)

Internal power consumption

< 0.8 W in normal operation

Humidity

0 - 100% relative humidity, non-condensing

Turn-on time< 60 s⁽⁴⁾**4-20 mA HART®****Output**

Two-wire, 4-20 mA. Digital process variable is superimposed on 4-20 mA signal, and available to any host that conforms to the HART® protocol. The digital HART signal can be used in multidrop mode.

HART universal revision

7

Load limitations

For HART® communication, a minimum loop resistance of 250 Ω is required. Maximum loop resistance (R) is determined by the voltage level of the external power supply (U_E):

$$R = 44.4 \times (U_E - 14)$$

(4) Time from when power is applied to the transmitter until performance is within specifications.

Figure 4: Load Limits

Analog signal on alarm

The transmitter automatically and continuously performs self-diagnostic routines. If a failure or a measurement error is detected, the analog signal will be driven offscale to alert the user. High or low failure mode is user-configurable.

Table 1: Signal on Alarm

Standard	High	Low
Rosemount standard	≥ 21.75 mA	≤ 3.75 mA
NAMUR NE43	≥ 21.5 mA	≤ 3.6 mA (default)

Analog saturation levels

The transmitter will continue to set a current that corresponds to the measurement until reaching the associated saturation limit (and then freeze).

Table 2: Saturation Levels

Standard	High	Low
Rosemount standard	20.8 mA	3.9 mA
NAMUR NE43 (default)	20.5 mA	3.8 mA

Bluetooth® connectivity

Typical range

At least 50 ft. (15 m) line of sight.

Maximum communication range will vary depending on orientation, obstacles (person, metal, wall, etc.) or electromagnetic environment.

Smart Echo Supervision™ technology

The Smart Echo Supervision technology automatically tracks all echoes, including those from obstructions in the tank, and distinguishes them from the real product surface echo. This ensures the true product level is reliably and accurately reported.

Process pressure

-15 to 43.5 psig (-1 to 3 bar)

Note

The PE100 flanges must be used only in non-pressurized applications.

Temperature limits

Process temperature

-40 to 176 °F (-40 to 80 °C)

Ambient temperature

-40 to 176 °F (-40 to 80 °C)

Storage temperature

-40 to 194 °F (-40 to 90 °C)

Physical specifications

Material selection

Emerson provides a variety of Rosemount products with various product options and configurations, including materials of construction that can be expected to perform well in a wide range of applications.

The product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options, and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration, or materials of construction selected.

Housing and enclosure

Process connection

NPT 1½-in. or ISO 228/1-G1½-in. thread with a choice of different brackets, adapters, and flanges

Materials

- Transmitter housing: Polyvinylidene fluoride (PVDF)
- M12 housing: Stainless steel
- M12 contact body: Polyamide (PA)

Related information

- Stainless steel 1.4404

Threaded adapters

Materials

Stainless steel 316/316L/1.4404

(5) Verified with selection of cables from Weidmuller; for other cable selections IP68 conditions may vary.

Material exposed to tank atmosphere

- Antenna and housing: PVDF
- Gasket: EPDM or FKM GLT
- Flange: PE100, 316/316L, or 1.4404
- Threaded adapter: 316/316L/1.4404

Electrical connection

Power supply

The transmitter operates on 14-35 Vdc at the transmitter terminals.

Connector type

M12 male (A-coded)

Cable selection

Use 24-18 AWG wire (0.20-0.75 mm²). Twisted pairs and shielded wiring are recommended for environments with high EMI (electromagnetic interference).
Field wiring shall be rated for 88 °C.

Wiring diagram

Figure 5: Connection

Table 3: Pin Assignment

Pin	Wire color ⁽¹⁾		Signal	
1	BN	Brown	L+	24 V
2	WH	White	NC	Not connected
3	BU	Blue	L-	0 V
4	BK	Black	NC	Not connected

(1) According to IEC 60947-5-2.

Installation considerations

Before installing the device, follow recommendations for mounting position, sufficient free space, nozzle requirements, etc.

Mounting position

When finding an appropriate location on the tank for the device, the conditions of the tank must be carefully considered.

Consider the following guidelines when mounting the device:

- For optimal performance, the device should be installed in locations with a clear and unobstructed view of the product surface.
- The device should be mounted with as few internal structures as possible within the radar beam.
- Do not mount close to or above the inlet stream.
- Do not mount the device on a manway cover.
- Do not position the device directly over a side manway door.
- Multiple Rosemount 1208C devices can be used in the same tank without interfering with each other.

Figure 6: Recommended Mounting Position

Free space requirements

If the device is mounted close to a wall or other tank obstruction such as heating coils and ladders, noise might appear in the measurement signal. See [Table 4](#) for recommended clearance.

Figure 7: Free Space Requirements

Table 4: Distance to Tank Wall (L)

Minimum	Recommended
8 in. (200 mm)	½ of tank radius

Inclination

The device should be mounted vertically to ensure a good echo from the product surface. See [Figure 8](#) for recommended maximum inclination.

Figure 8: Inclination

Non-metallic tanks

Nearby objects outside the tank may cause disturbing radar echoes. Wherever possible, the device should be positioned so that objects close to the tank are kept outside the radar beam.

Beam angle and beam width

The device should be mounted with as few internal structures as possible within the radar beam.

Figure 9: Beam Angle and Beam Width

Beam angle (α)

8°

Beam widthSee [Table 5](#) for beam width at different distances.**Table 5: Beam Width**

Distance (D)	Beam width (W)
6.6 ft. (2 m)	0.9 ft. (0.3 m)
13.1 ft. (4 m)	1.8 ft. (0.6 m)
19.7 ft. (6 m)	2.8 ft. (0.8 m)
26.2 ft. (8 m)	3.7 ft. (1.1 m)
32.8 ft. (10 m)	4.6 ft. (1.4 m)
49.2 ft. (15 m)	6.9 ft. (2.1 m)

Nozzle requirements

See [Table 6](#) for recommended nozzle dimensions. The inside of the nozzle must be smooth (i.e. avoid bad welding, rust, or deposit).

Figure 10: Mounting in Nozzles**Table 6: Nozzle Requirements**

Nozzle diameter (D)	Maximum nozzle height (H)
1.5 in. (40 mm)	5.9 in. (150 mm)
2 in. (50 mm)	7.9 in. (200 mm)
3 in. (80 mm)	11.8 in. (300 mm)
4 in. (100 mm)	15.8 in. (400 mm)
6 in. (150 mm)	23.6 in. (600 mm)

Product certifications

See the Rosemount 1208C [Product Certifications](#) document for detailed information on the existing approvals and certifications.
